A propos d'Eukarys

Eukarys is a biotechnology company from the biocluster of the Evry Genopole (France) which has developed the first and only eukaryotic artificial expression system called C3P3. This system allows high-yield production of mature messenger RNAs in host cells and thus proteins of interest.

Thanks to the C3P3 system, Eukarys has developed a radically innovative therapeutic approach called synthetic gene therapy based on the administration of synthetic DNA. Gene therapy, whose efficacy and safety of use is now demonstrated in preclinical studies, has been designed to provide practical solutions to almost all of the challenges faced by gene therapy.
